

Got five minutes?

You would be  
**mad** not to flick  
through this...

(The horses you treat will  
thank you for it!!)

**VetCell**  
*Stem cell therapy you can rely on*

[www.vetcell.com](http://www.vetcell.com)  
[info@vetcell.com](mailto:info@vetcell.com)  
+44 (0)1865 922227

A rider wearing a black and orange patterned jacket, white breeches, and a black helmet is riding a brown horse. The horse is in motion, possibly during a cross-country event, as evidenced by the white protective boots on its lower legs. The background shows a grassy field with trees and a fence.

**Early VetCell stem  
cell treatment makes  
all the difference to  
SDFT injuries**

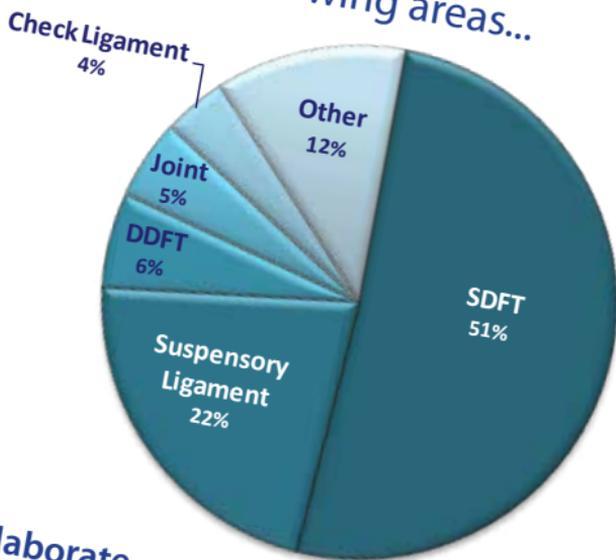

**Sport horses treated  
with VetCell's stem  
cell therapy within  
one month of SDFT  
injury have just a  
4% chance of  
re-injury**

(yes, 4%, we were pretty shocked by that but the results have been shown to be statistically significant!)

# Just for tendons?

## Nope.

VetCell's stem cell therapy has been used to treat the following areas...

### To elaborate...

Joints - mainly stifle, some carpus, tarsus, distal DP, subchondral bone cysts, meniscal tears, fetlock problems, synovitis and early stage osteoarthritis

### Other possible indications:

Bursae - mainly navicular bursae  
Laminitis

Digital sheaths (e.g. intra-theal DDFT tears)

# Not all stem cell therapies are created equal!

Stem cell culture takes time (approx. three weeks) and effort. It is not a quick process so be wary of cheap and speedy services. Are they really offering you the best option for treating the horse?

**When you buy 20 million stem cells from VetCell, you *get* 20 million stem cells from VetCell. No bone spicules, no soup of other cells... **no junk.****

Vetcell's stem cell therapy is based on over ten years of research by the RVC's Professor Roger Smith

# HAPPY 10TH BIRTHDAY VetCell

VetCell's first treatment took place in August 2002 so 2012 marks our ten year anniversary.

**Ten years on, ten times more effective...**

We started out using 2 million stem cells for each horse. Now our standard dose is 20 million as this has been shown to significantly improve the horse's recovery.

All stem cells leaving VetCell's lab are checked for sterility, viability and quantity to maintain high standards. (Check out the grey background picture...they are actual stem cells, ready for dispatch!!)

VetCell's technique is **patented** so no other company can claim to offer the same treatment or use our research to directly support their own products.

VetCell have treated  
eventing, dressage, p  
trotting, endurance,  
barrell racing, cutting  
allrounders and pony

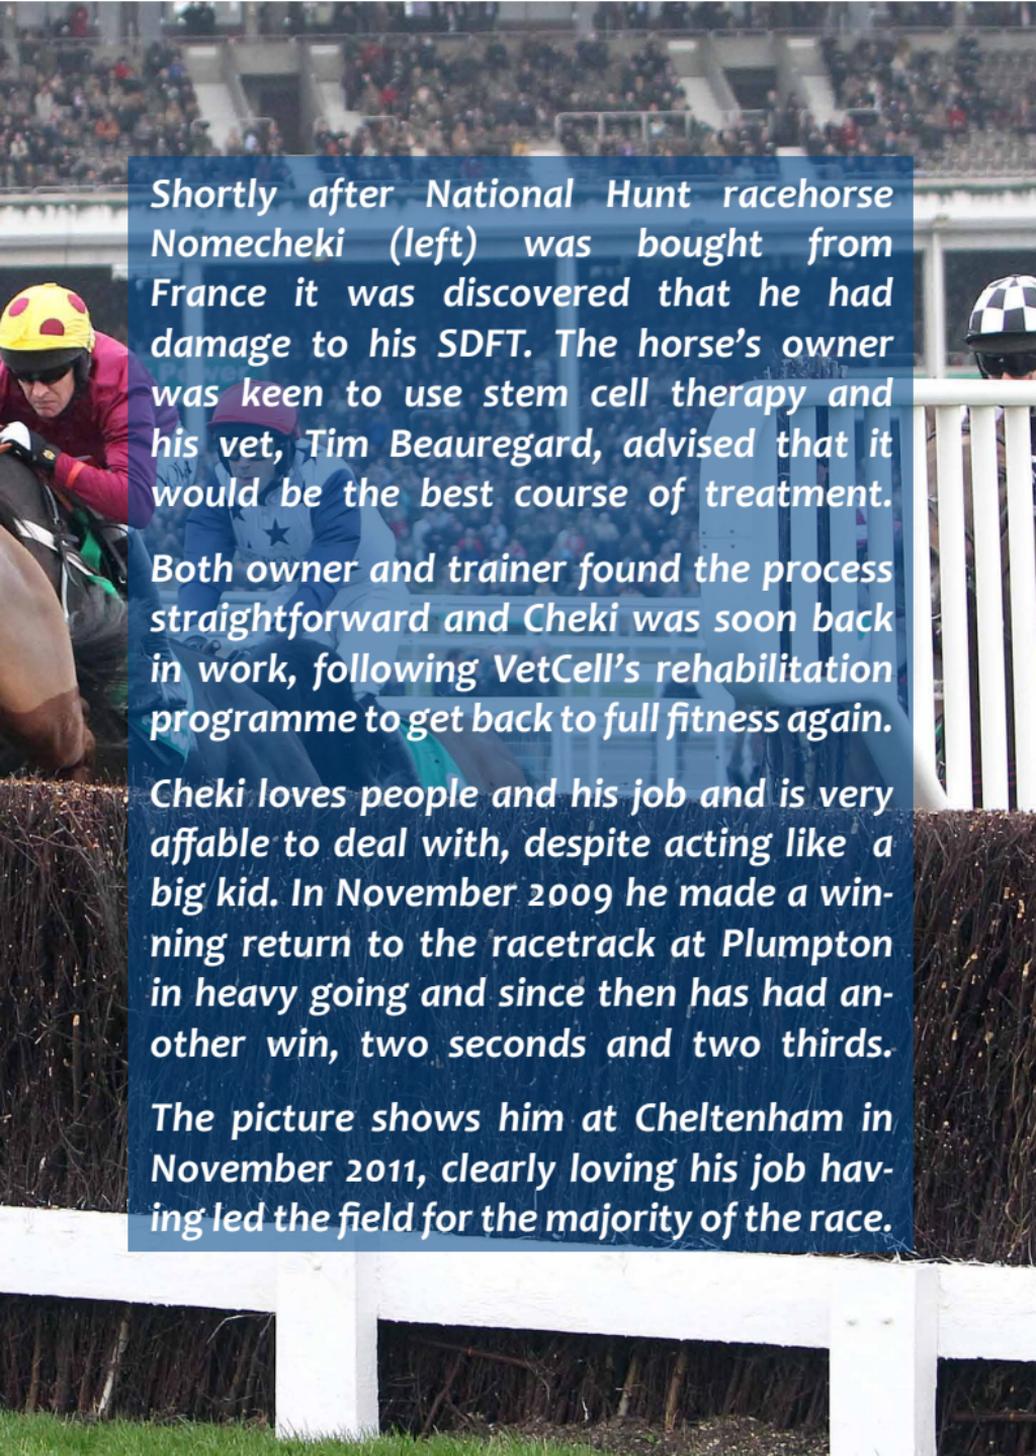

stars of racing,  
polo, showjumping,  
showing, hunting,  
g and plenty of  
club ponies too.

The latest published research shows that ***VetCell's stem cell therapy halves the chance of re-injury to the SDFT*** in NH racehorses, when compared with conventional treatments. (Godwin et al., 2012)

A photograph of a jockey in a red jacket and yellow helmet with red spots riding a horse. The jockey is looking down at the horse. The background shows a crowd of spectators in a stadium.

Shortly after National Hunt racehorse Nomecheki (left) was bought from France it was discovered that he had damage to his SDFT. The horse's owner was keen to use stem cell therapy and his vet, Tim Beauregard, advised that it would be the best course of treatment.

Both owner and trainer found the process straightforward and Cheki was soon back in work, following VetCell's rehabilitation programme to get back to full fitness again.

Cheki loves people and his job and is very affable to deal with, despite acting like a big kid. In November 2009 he made a winning return to the racetrack at Plumpton in heavy going and since then has had another win, two seconds and two thirds.

The picture shows him at Cheltenham in November 2011, clearly loving his job having led the field for the majority of the race.

**VetCell offer training,  
either individually with  
one of our veterinary  
advisors assisting you  
with a case, or group  
CPD training at the RVC**

Stem  
cell  
therapy  
from **VetCell**  
is covered by  
**standard  
insurance  
policies**  
under normal  
'vets fees'  
cover.

Did you know you can  
**bank stem cells** for the  
future, in case the horse  
ever needs them?

Request  
cryo-storage of  
extra stem cells when  
buying any stem cell  
therapy service from  
VetCell

Take a sample  
of umbilical cord  
blood at birth

Take a bone  
marrow sample when  
any horse has surgery,  
to bank for his  
future

**Stem cell banking...  
future-proofing for horses!**

**What are you  
waiting for?**

**Contact us now**

[info@vetcell.com](mailto:info@vetcell.com)

+ (0)1865 922227

We can help you **achieve excellent results** with our stem cell treatment:

We can **visit your clinic** to talk to vets about the data, our stem cell therapy in general and other research in the field of regenerative medicine

We can offer **group CPD training** at the RVC or **individual training** at your clinic to familiarise you with the stem cell therapy procedures

We can send an expert to **come and assist** with your first stem cell case

We can provide **support and advice** after the treatment to ensure that the owner is clear about the rehabilitation programme

We can attend **client evenings** or **open days** at your clinic to answer your clients' queries about stem cell therapy

**Go on...**  
**get in contact...**  
(we would love to talk to you!)
